

# MarkDoc: A literate programming package for Stata

```
. local a 1

. scalar b = 2

. local c "HI"

. scalar d = "World"

. sysuse auto, clear
(1978 Automobile Data)

. summarize price
```

| Variable | Obs | Mean     | Std. Dev. | Min  | Max   |
|----------|-----|----------|-----------|------|-------|
| price    | 74  | 6165.257 | 2949.496  | 3291 | 15906 |

```
. di "and this?"
and this?
```

## Header one

this is a quote block. this is a quote block. this is a quote block. this is a quote block. this is a quote block. this is a quote block. this is a quote block. this is a quote block. this is a quote block.

```
local a 1
scalar b = 2
local c "HI"
scalar d = "World"
sysuse auto, clear
summarize price
di "and this?"
```

Or even something like the following:

```
quietly do something
```
